

HABITATS

Main Objectives:

1. To show an understanding of the relationships between living things in a habitat.
2. To construct food chains to represent the feeding relationships in a local habitat.
3. To realise that all living things in a habitat are perfectly adapted to live there, through the study of living things in their habitat.
4. To use branched keys to identify living things in a habitat.
5. To know, understand and be able to use scientific vocabulary related to the study of habitats.
